Particle size	

The **Atomizer 109** aerosol therapy unit is particularly suitable for use in hospitals and outpatient clinics. Its unique technique design, overcoming the inevitable limits set by the small portable units, offers superior performance to the physician that will find to be an accurate and essential part of their clinical equipment. This unit encompasses all the dictates of modern aerosol therapy technology. Its quality, materials and performance, in addition to its simplicity of use, make it the ideal unit for a wide range of requirements.

- The unit has an aluminum housing painted with epoxy powder
- Its piston electro-compressor, equipped with a safety thermal cut-out, ensures high performance and long life
- It is also equipped with a flow regulator and an air intake professional filter.

Compliant with directive 93/42 CEE
